

## ENVIRONMENTAL POLICY

Superform is a manufacturer of super-plastically formed sheet Aluminium components based in Worcester supplying to five market sectors, Aerospace, Automotive, Rail, Medical and commercial.

Our aim is to provide our customers with an excellent product and service whilst looking to reduce our impact on the environment.

We look to continually improve the way we do things so to improve our environmental performance and seek to prevent pollution through the use of modern technology and best practices. In doing so we are committed to ensuring that we comply with relevant environmental legislation and other appropriate requirements such as customer specific requirements and Vehicle end of life IMDS regulations.

As a result of our activities we recognise that we impact on our environment in a number of ways and hence we aim to:-

- Reduce the consumption of energy resources used in our key processes.
- Manage our waste streams and seek to eliminate, reduce, re-use or recycle them where practical to reduce waste going to landfill.
- Maintain our equipment to ensure that it is operating efficiently through TPM.
- Employ good housekeeping practices at all times and ensure efficient use of resources through 5S.

These aims will be accomplished through the implementation of an effective environmental Management System which will be regularly audited and reviewed to monitor that it is achieving the aims of this policy.

We also recognise the important role that staff and others working on our behalf have in achieving this policy. They will be made aware of their responsibilities and appropriate support training will be provided.
